Live Show Radar · Components map

Concert and festival alerts for India. Every AI step runs on Google Gemini Flash through the official @google/genai SDK; no other model is used anywhere.

live-show-radar-pink.vercel.app

5 Gemini tasks - 20 components - 141 tests

Actor / Platform	Trigger	Input	Context	Processing	AI	Output
Schedulers GitHub Actions + Vercel Cron	**Every 30 minutes** daily cron as backup		**CRON_SECRET** repo + Vercel secret	**POST /api/scan** bearer token, fails on non-2xx		**Scan run opened** scan_runs row
Sources Google News - Tavily - Gemini	**Scan opens**	**15 due artists** names + aliases, starred first	**14-day window** 5 Indian ticketing sites; 6 h sweep gap	**Fetch in parallel** concurrency 5, 10 s timeout each	**Grounded search** optional, starred only	**Normalised items** {source, url, title, snippet, date}
Filter Deduplication	**Items fetched**	**All items this scan**	**url_hash index** all previous scans; 30-day limit	**Canonicalise + SHA-256** drop duplicates and stale items		**source_items** only genuinely new items continue
Show extractor Gemini Task 1	**Unprocessed items**	**Artist + aliases** up to 25 items per call	**Appendix B schema** today's date; full artist list	**Structured output** Zod validated, one retry	**Extract candidates** reports near misses honestly	**Show candidates** with evidence quote + source URL
Triage + matcher Rules in code	**After extraction**	**Show candidates**	**Keep rules** India, confidence 0.7+, upcoming	**Build dedup_key** artist | city | date		**Accepted** new show, or an existing match
Rejection log What it refused	**A candidate fails**	**Candidate + reason**	**Six reasons** not India, tribute, namesake, past	**Store the evidence** quote it was judged on		**rejections** shown on /filtered, never alerted
Reconciler Gemini Task 2	**dedup_key exists**	**Stored show + candidate**	**Null means unreported** never cleared	**Merge stated fields**	**Same show? changed?** one material change	**Show updated** flagged when worth an alert
Prioritiser + writer Rules in code + Gemini Task 3	**New show or change**	**City, confidence, early bird**	**P0 Bengaluru + early bird** P1 / P2 / P3 by rule	**Priority set in code** the model never sets it	**Write the alert** 600 visible chars, explains priority	**Alert ready** P3 stops here: dashboard only
Notifier Telegram Bot API - Resend	**Alert written**	**Message + chat ID**	**alert_key unique** show | type | channel | change	**Claim row, then send** the lock is the constraint		**Karan is alerted** alerts row with delivery status
Karan Bengaluru	**Phone buzzes**	**[BUY TODAY] ...**		**Reads and decides** ticket link in the message		**Buys the early bird** before the window closes
Database + dashboard Neon Postgres - Next.js	**Every stage / a visit**	**Nine tables**	**UTC stored** Asia/Kolkata displayed	**Read live on request**		**Dashboard, calendar, logs** shows, alerts, scans, filtered

Deployment and scheduling — code to production

GitHub
repository + Actions cron → **Vercel**
Next.js 16, 300 s ceiling → **Neon Postgres**
Drizzle migrations → **Live app**
scans every 30 min

= AI component = System step = Output = Human step = Refused / not alerted = Context

Priority is decided in code, never by the model. The model judges language; code decides consequences.
